

Merry Christmas Box Instructions

This design was built specifically for use with .20" birch ply. This is readily available at Home Depot in 8'x4' sheets that can be cut down to 19.2x12 easily. If you wish to adjust it for use with other thickness wood you will need to resize the entire design as necessary:

Thickness	Adjustment
.25"	Increase 125%
.125"	Decrease 65%

I used a spray adhesive to glue two pieces of velum behind the "Merry Christmas" cut-out. Velum is a wonderful transmitter for light and defuses it very well. The lights in the cavity can be any micro LED string. I plan on putting some chase lights in there so that there is some fading going on. You do not need a very long length of lights. Use your imagination.

This design was not done with kerf in mind whatsoever. Since it is rather a large design, kerf should not be too concerning.

This design is being provided free of charge and can be used in any way you wish but please remember where you got it 😊

MERRY CHRISTMAS!

Jon Glazer
